

# RES strategies in the 2020 context and the auctions for renewable energy support

Zsuzsanna Pató

Budapest  
June 8, 2016

## Objectives:

- contribute to the formation of sustainable energy systems in Central Europe, both from a business and environmental perspective;
- provide a **platform for open-ended, European-wide dialogue** between government and business actors, infrastructure operators, energy producers and traders, regulators and consumers, journalists and other interested entities.
- develop **policy briefs and issue papers with forward-looking proposals** concerning challenges posed by energy and infrastructure systems and organize regional forums allowing stakeholders to become familiar with the latest technological and regulatory developments within the industry.

## REKK Foundation will realize its goals through the following primary activities:

- sustain open expert forums to present and discuss **Hungarian, regional, European and international energy policy initiatives**
- contribute to **knowledge sharing** about the regulation of energy and other public utility networks and about the market trends of these sectors, dissemination of applied solutions, educational activities and research

## A Central and South East Europe Energy Policy Forum

Regional energy policy forum for policy in English language. Energy policy issues with regional importance are selected for discussion with decision makers from the CEE countries.

## REKK Workshops

The leading event of REKK on a specific energy policy issue linked to REKK research with highly qualified international speakers.

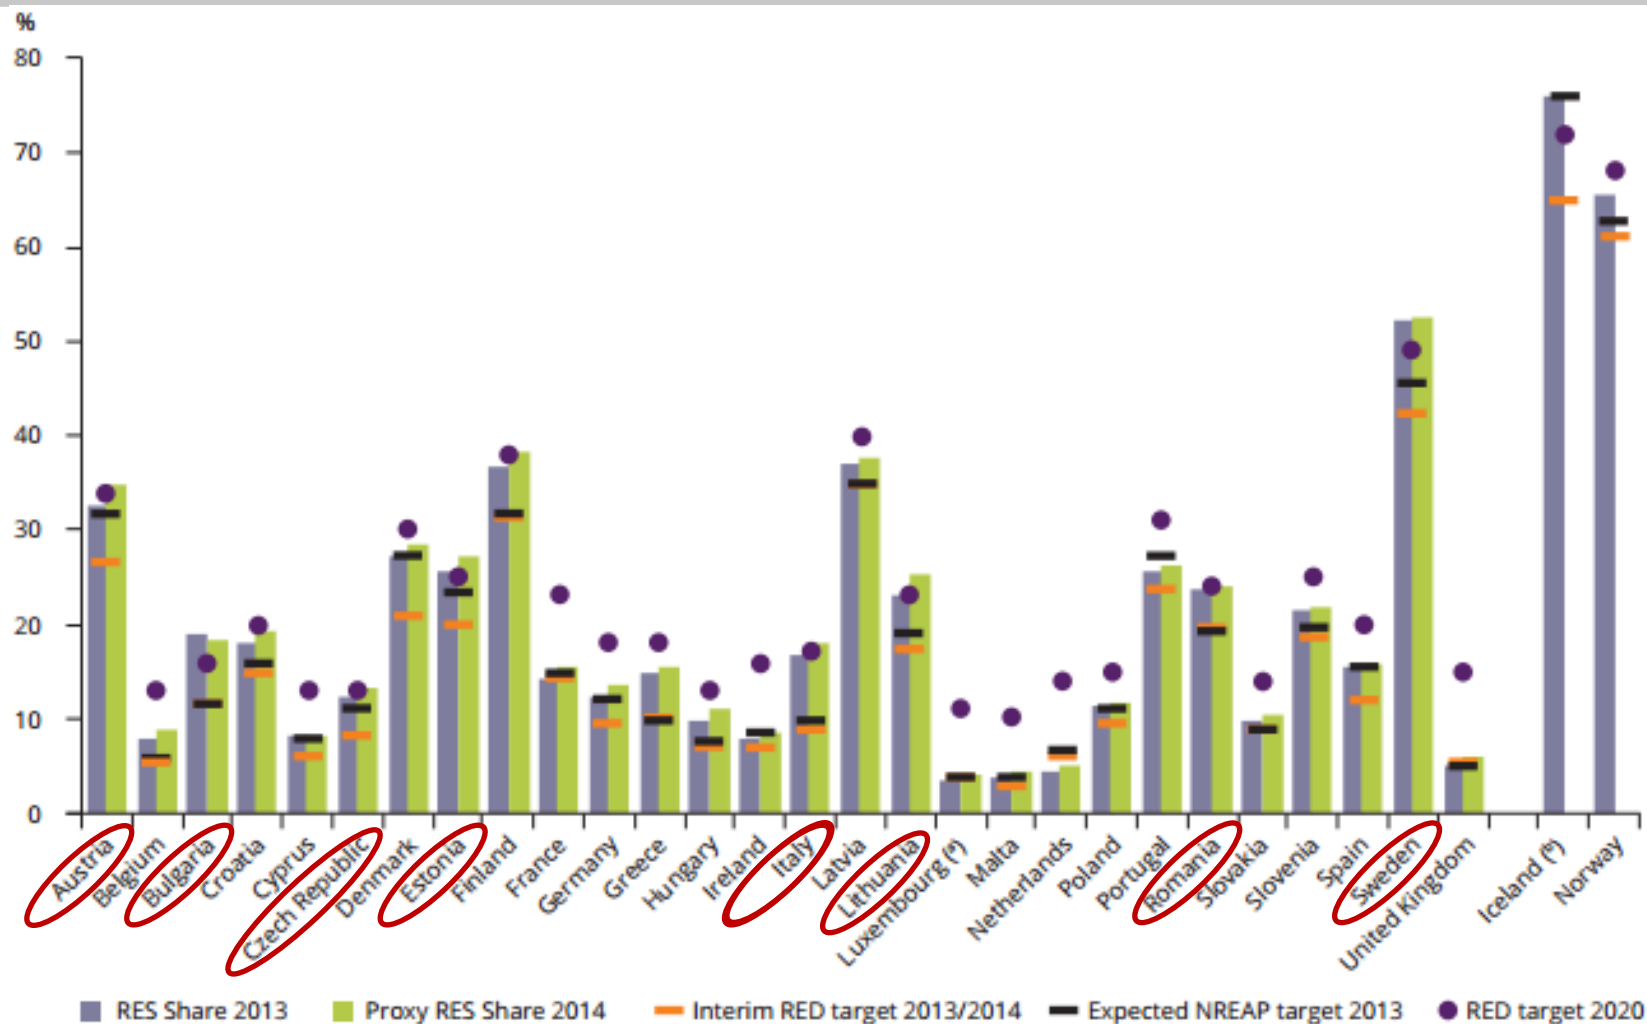

## Market Monitoring Club

Executive level events on actual issues related to the Hungarian energy markets.

## Energy Futures

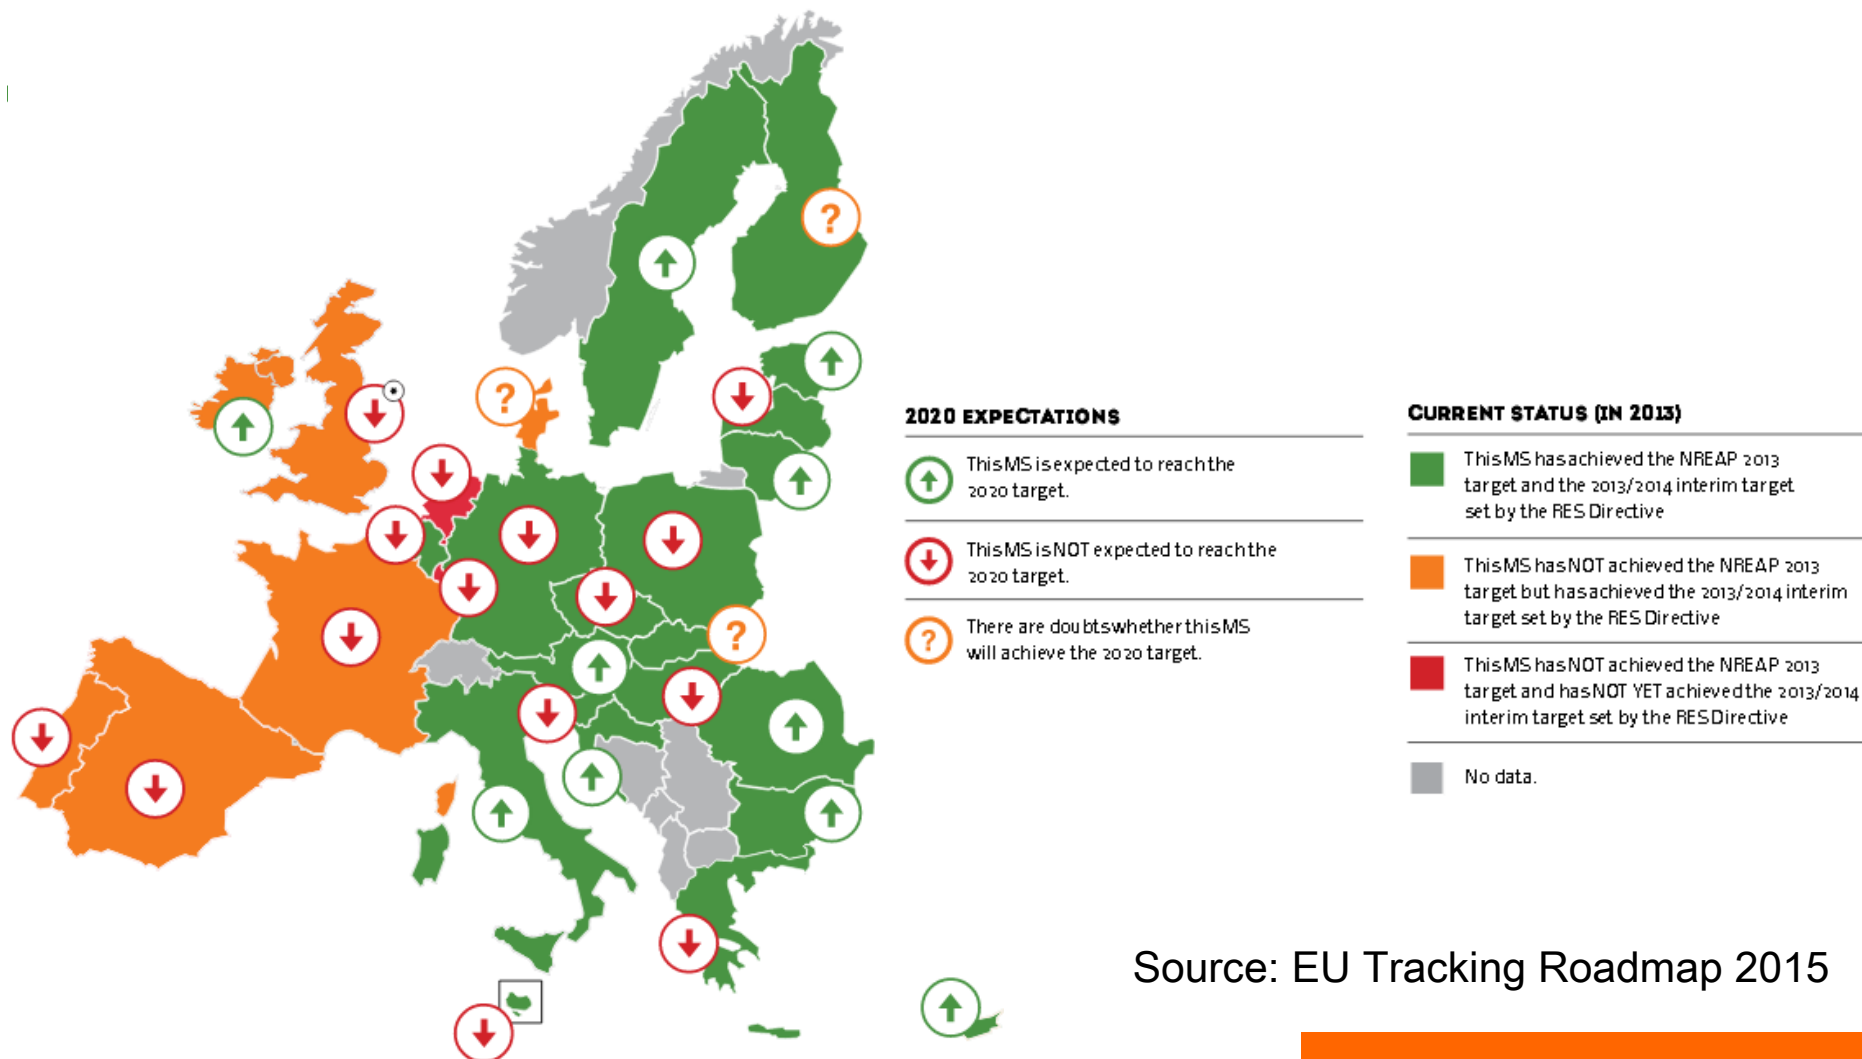

Professional forum on future technologies and policies, targeting the wider Hungarian professional audience.

# 2020 national renewable targets and prospective compliance: a rosy picture

# Achievement of RES targets: not so rosy picture?

Source: EU Tracking Roadmap 2015

- Is there any further policy intervention needed to guarantee 2020 target compliance in your country?
  - If no – what were the key issues of success (e.g. preferred technology, regulation, specificities of the subsidy scheme)
  - If yes – key actions planned in the next few years
- Which are the priority sectors for RES target achievements in your country: RES-E, RES H and RES-T?
- What are the experiences from the 2020 RES pathway that can be used in the 2030 context? What will be different in the next period (beyond 2020)?

- Member state presentations on national 2020 RES strategy
- Afternoon session starts with two introductory presentations on the AURES project and on RES auctions and state aid rules
- Followed by country case studies on RES auction design
- The afternoon session closes with a roundtable discussion on auctions in the CEE region: „Is there anything specific?“

Thank you very much for your attention!
